MY TIMELINE

2017 - NOW

Student at FFHS in computer science & Intern at Swisscom

At the FFHS (Fernfachhochschule Schweiz) I study until 2021 for my BSc in computer science. For my special field I chose Data Science, because I want to lead my career in this direction. Next to my study I work at Swisscom as an intern. So far I worked on the following projects at Swisscom:

- ▶ Netnear IT: I developed Ruby on Rails applications to automate network operations. I automated the process of creating configuration files for every network hardware device we had in service.
- ▶ VicoTV: As the project lead of an internal startup I learned a lot about the framework Lean Startup as well as leadership. I managed a team of 8 people. Next to it I also participated in the development of a crossplatform mobile application with React Native. My team developed a MVP with a test group of 150 people.
- ▶ FMLab: I worked in an innovative marketing team. In direct communication with our marketing managers I developed the business logic in node-red or other services in Spring Boot, NodeJS Express and Angular. In addition I was responsible for the CI/CD of our applications with Jenkins. I achieved the save on several hours every week per developer.

HACKATHONS

I participated in 6 different Hackathons all around Europe and one even in Kathmandu. I won a challenge in two of them (Junction 2019 and Bern hackt 2018).

SKILLS
